

IBM AI Racing Competition

# Race Your Code

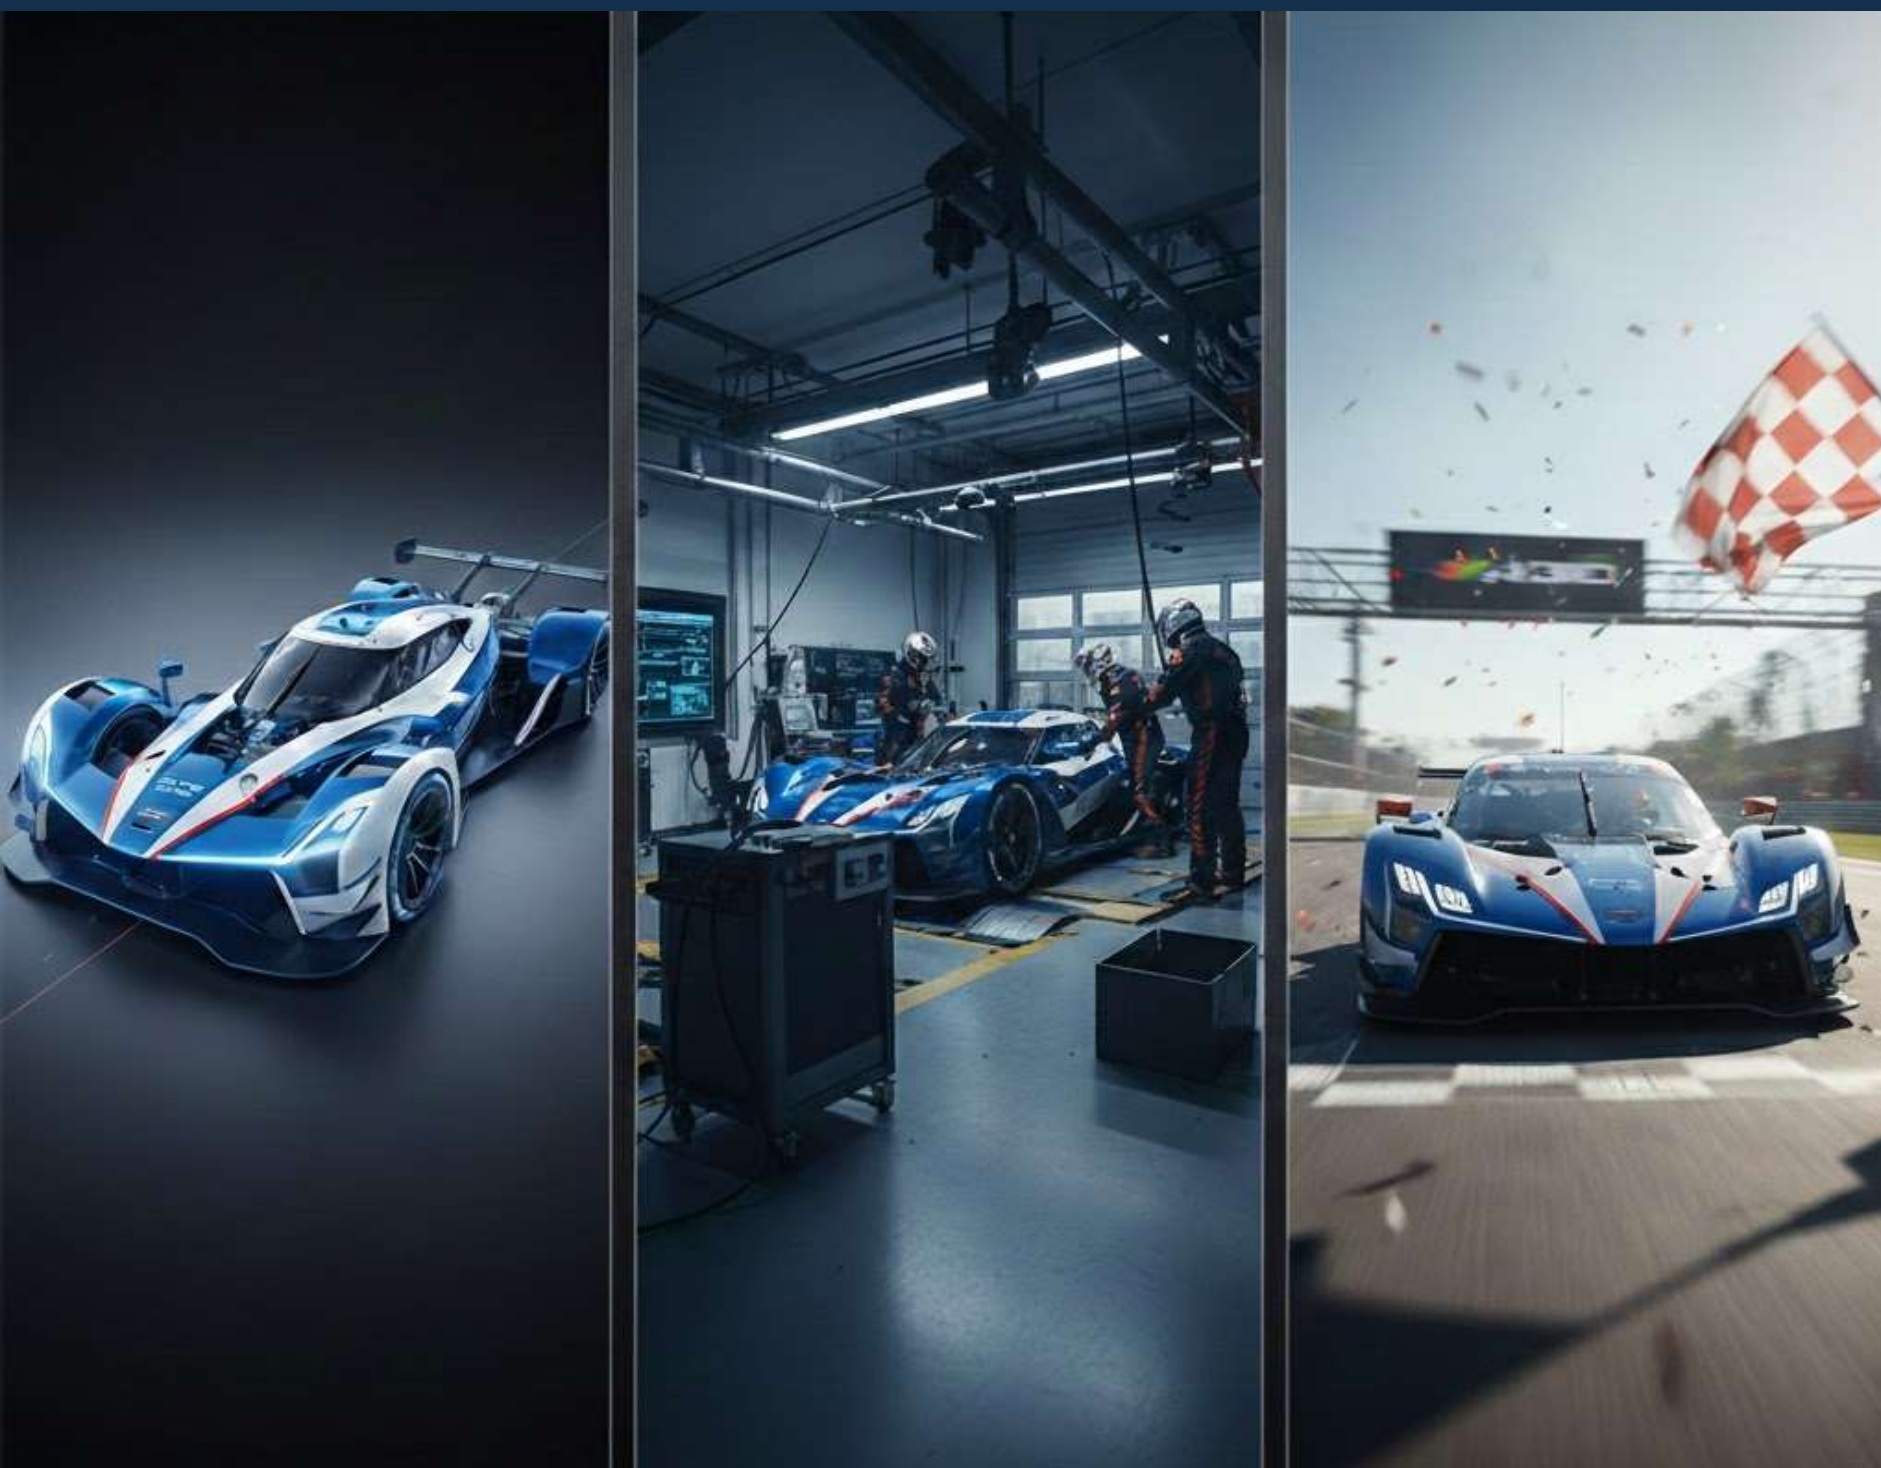

Join us in an exciting challenge where students **code**, **collaborate**, and **conquer** the world of self-driving formula cars on a virtual track.

**Brought by IBM**

**Powered by The Open Racing Car Simulator**

REGISTRATION OPENS MARCH 2026

# Code. Collaborate. Conquer.

IBM challenges college students to program intelligent racing strategies (racing algorithms) for formula cars in The Open Race Car Simulator (TORCS) using Python and IBM Granite AI models.

The fastest lap time on the Corkscrew track is just the beginning. Beyond the code, teams will produce a video presentation documenting their strategy, tool usage, and teamwork dynamics. This comprehensive challenge blends programming mastery, AI implementation, storytelling, and collaboration — showcasing the essential skills that distinguish industry-ready talent.

# How does it work?

## TEAM UP

Create a team of 3-5 students

## CODE & CREATE

Build your AI driver. Document your strategy.

## RECORD

Record your best lap performance, as well as your "Team video".

## SUBMIT TO WIN

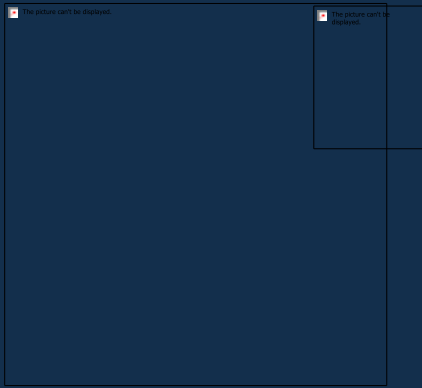

Submit your videos and your GitHub repo.

# Will You Manage?

Yes – with a full support system built to guide you

Success never happens solo.

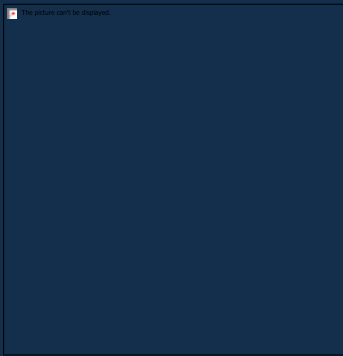

**IBM SKILLSBUILD

**PRACTICAL GUIDES**

**EXPERT MENTORING**

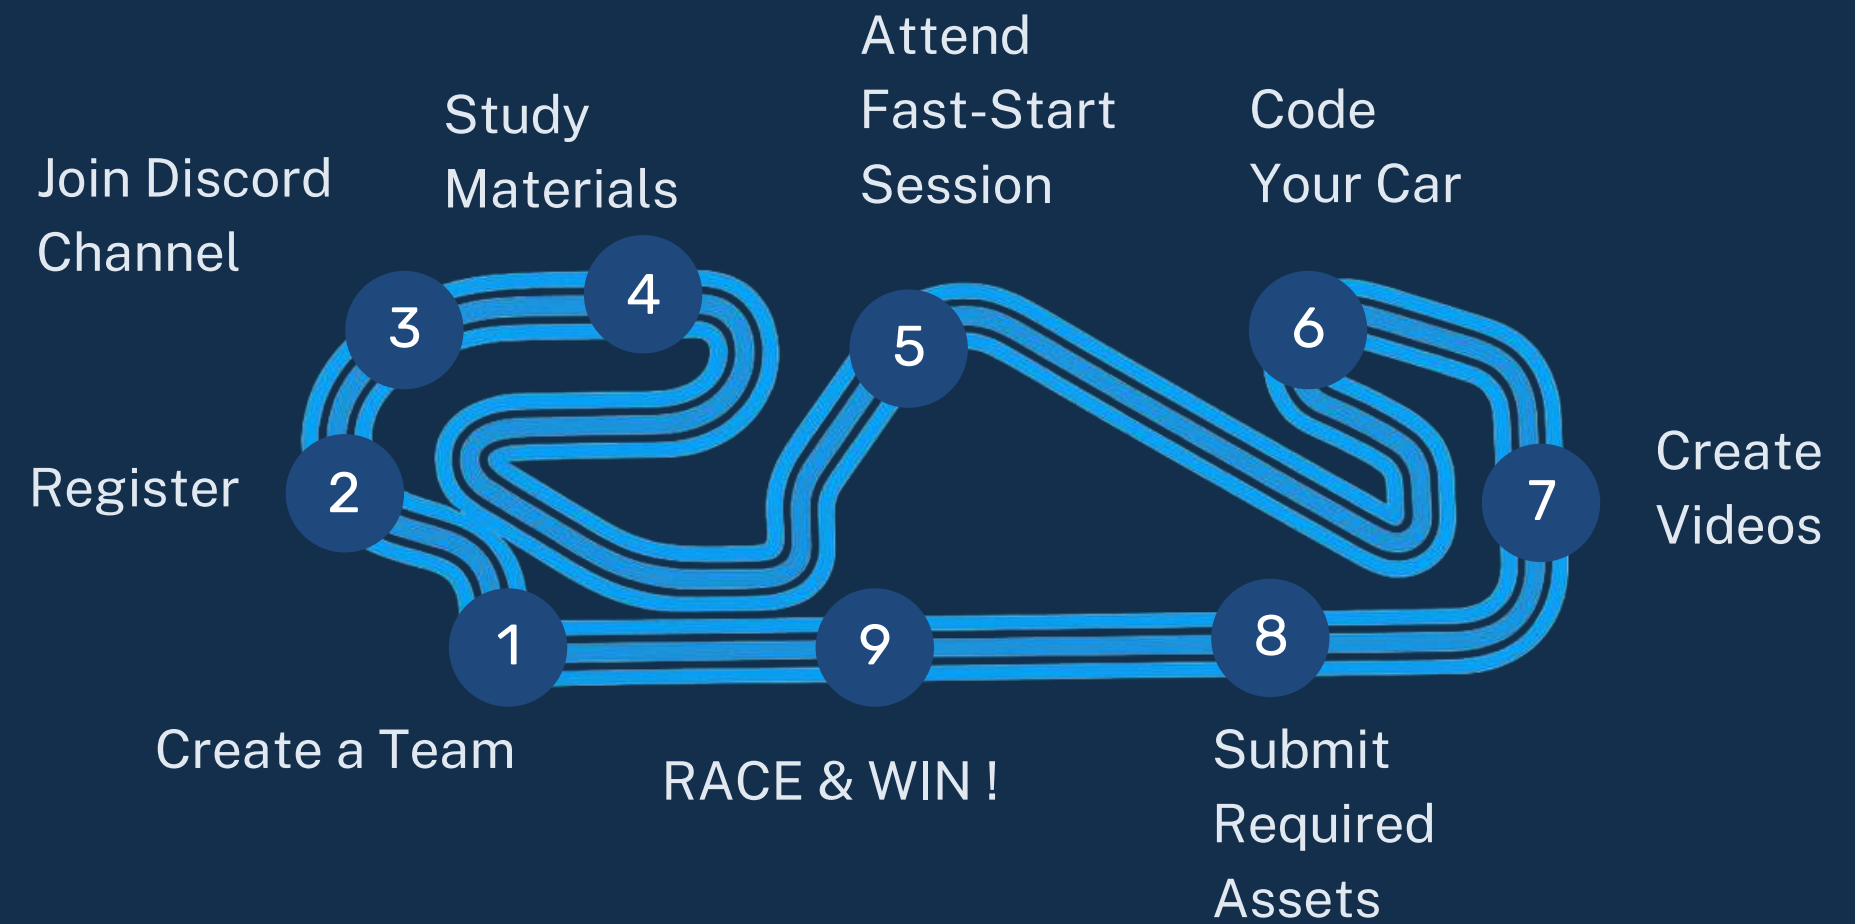

**FAST-START  
ORIENTATION SESSION**

**PEER COMMUNITY ON  
DISCORD**

# Get on Track!

# What's At Stake?

## SWAG

Exclusive branded merchandise.

## REMOTE INTERNSHIP/MENTORING

Gain valuable experience by working alongside IBM AI engineers.

## SPOTLIGHT

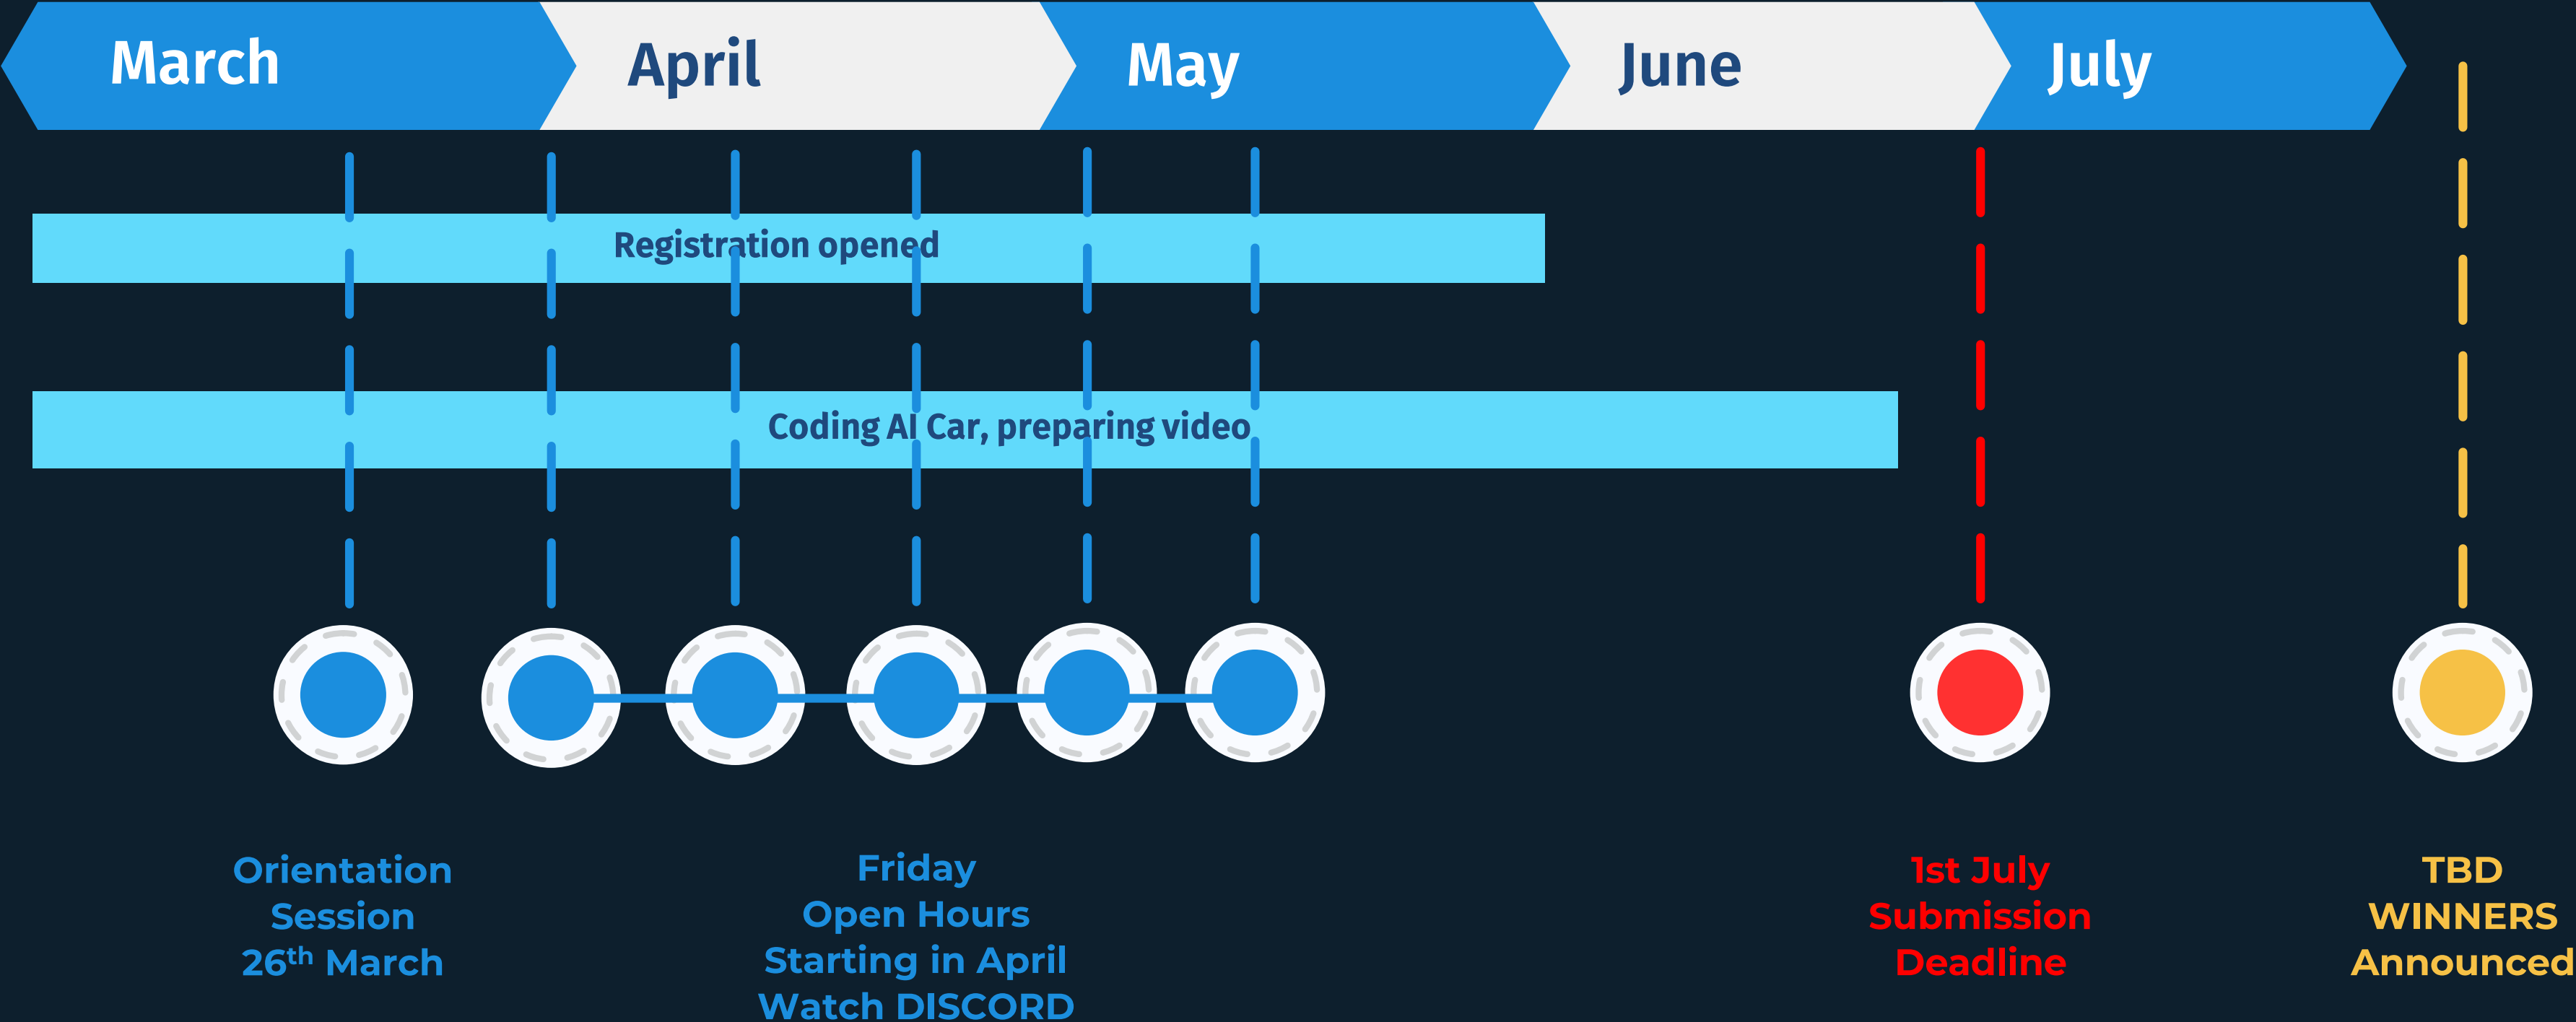

Your team's achievements featured on IBM conference.

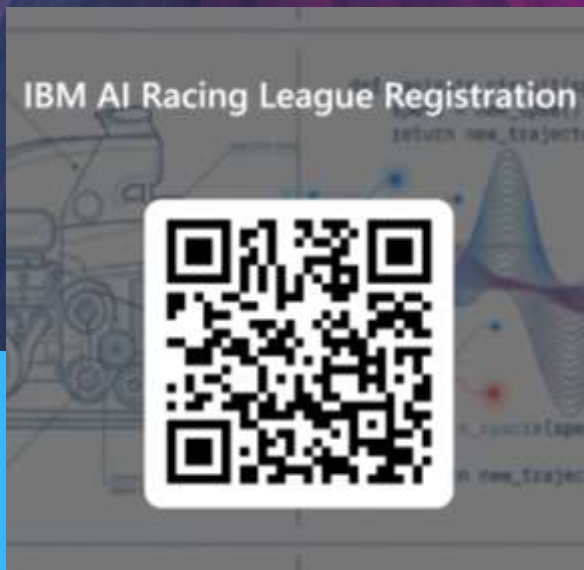

## PROGRESSION TO GEO ROUND

Best teams advance to Geo and World rounds to compete for additional stunning prizes.
